## Red Apples, Green Apples

A shop was selling red and green apples. I bought ten apples.

How many red apples and how many green apples might I have bought?

Use 10 two-coloured counters to represent the red and green apples. Toss the 10 counters to show how many red and green apples might be in the bag. Toss the counters at least 5 times. Record your results.

RED APPLES	GREEN APPLES
4	6

How many different combinations are possible?

How do you know if you have found them all?
